

CoActiveSoft Medication Management User Manual

Access CoActiveSoft Medication Management

Medication management is a powerful feature in CoActiveSoft. This feature allows you to enter medication-specific information once and apply it to all patients. In the 'Settings' section of the main menu, select 'Medications' (1), and the list of medications that have been entered already are displayed:

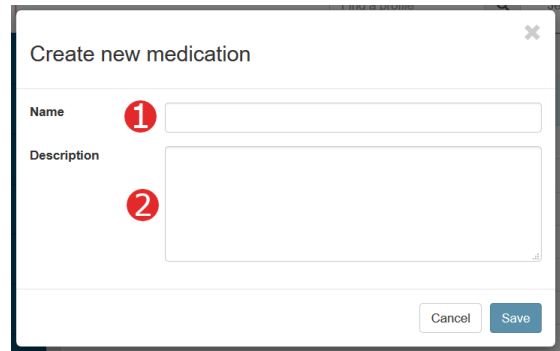

(Figure 1) Medication List

Add or Edit a Medication

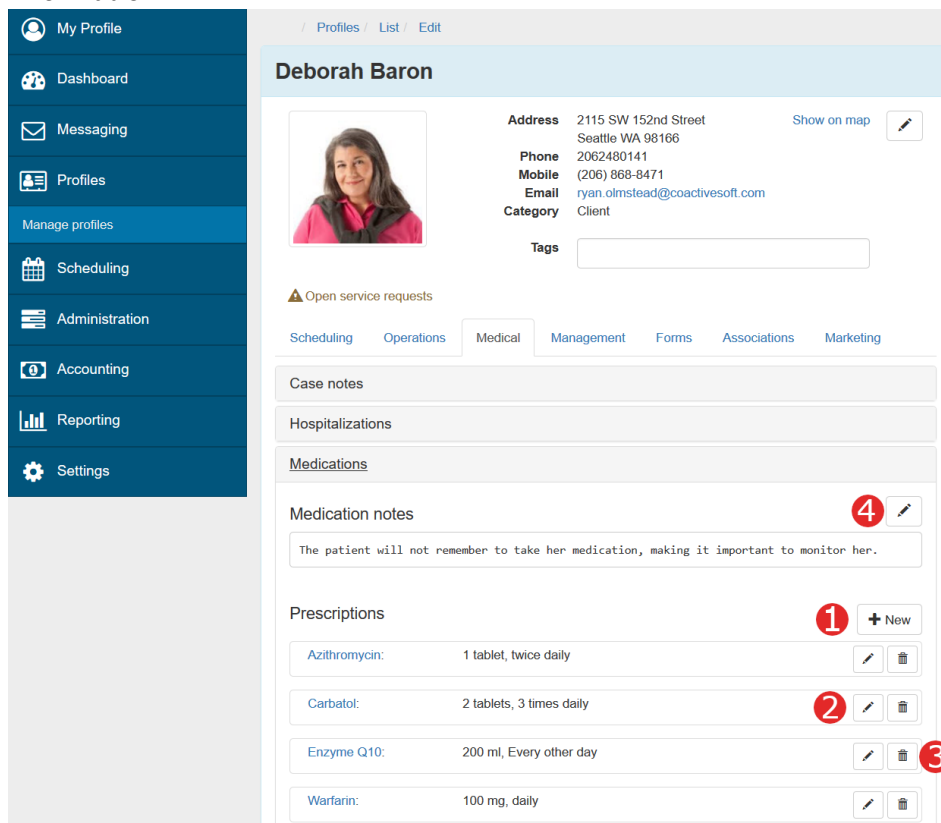

To add a new medication, click on 'New' on the list of medications (Figure 1, 2) and add the name (1) and description (2) on the Create Medication screen.

(Figure 2) Create Medication

Manage Patient's Medication

Once the medication has been added to the list, it can be added to a patient's profile. In 'Profiles', select the 'Medical' tab, then the 'Medications' section, click 'New' (1) on the medication list and enter the requested information.

Of course you can always edit (2) and delete (3) any medication instruction. You can also create comments (4) that apply to the entire medication process for that patient.

Click the New button (1), and CoActiveSoft shows the 'Create new prescription' screen:

The screenshot shows a 'Create new prescription' dialog box. It contains four text input fields labeled 'Medication', 'Dosage', 'Frequency', and 'Notes'. A '+ New' button is positioned to the right of the 'Medication' field and is highlighted with a red rectangular box. At the bottom right of the dialog, there are two buttons: 'Cancel' and 'Save'.

On the 'Create new prescription' screen, you will notice another 'New' button. This button allows you to set up a new medication just as you would from the 'Medications' section described earlier.
